

## 上下文无关语言的判定性质 • 无限语言问题 给定CFG G,如何判定其语言 L(G) 是无限的 算法: 1. 消去ε产生式和单一产生式 2. 消去无用符号 3. 构造变量的依赖图 4. 若变量的依赖图有环,则其语言是无限的

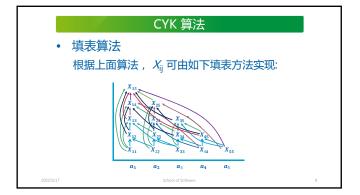

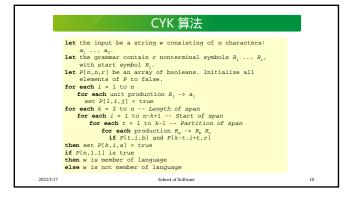

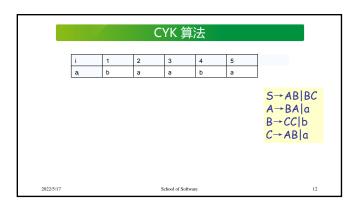

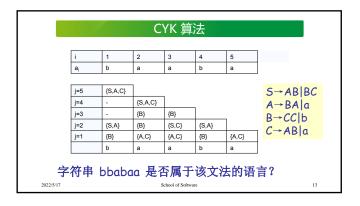

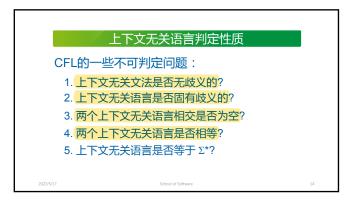

CYK 算法
 例: 给定下列CNF文法G,产生式如下:
 S→AB|BC
 A→BA|a
 B→CC|b
 C→AB|a
 字符串 baaba 是否属于该文法的语言?

 图 灵机的语言

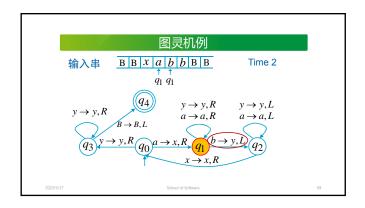

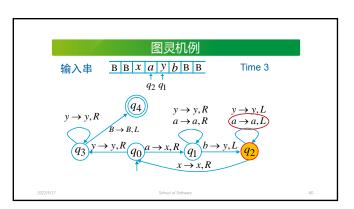

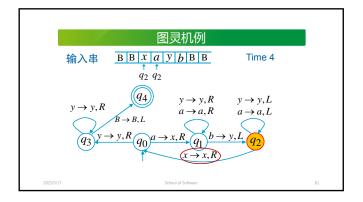

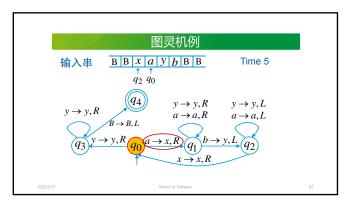

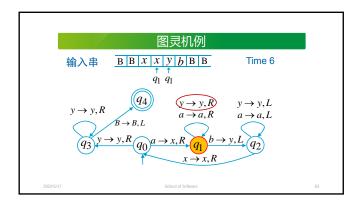

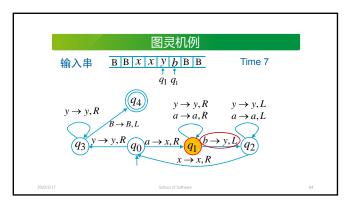

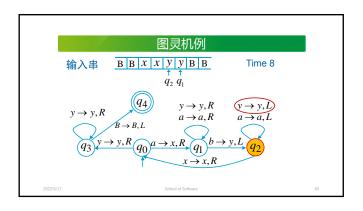

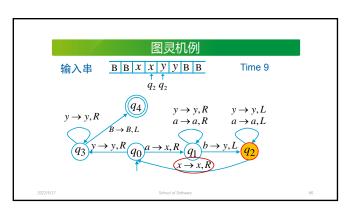

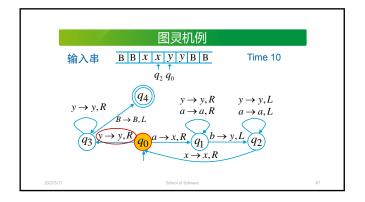

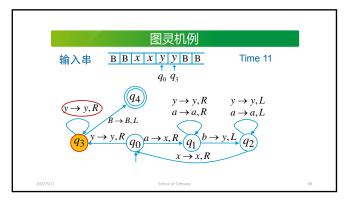

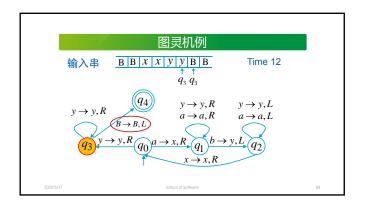

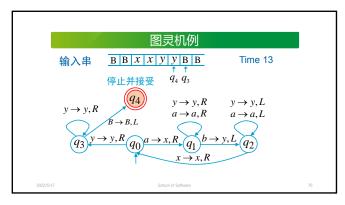

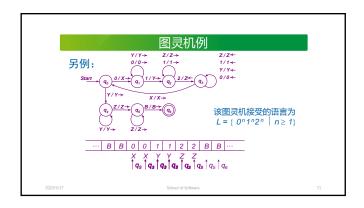

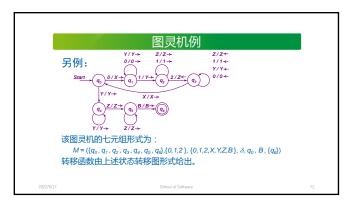

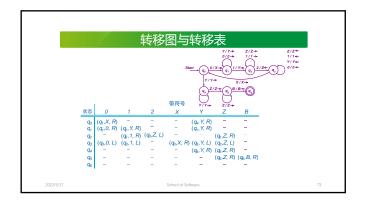

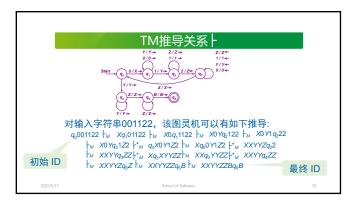

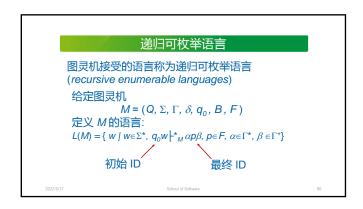

TM即时描述(ID) 图灵机  $M = (Q, \Sigma, \Gamma, \delta, q_0, B, F)$ 当前格局  $X_1X_2...X_{i-1}qX_iX_{i+1}...X_n$ 称为即时描述 或 ID (instantaneous descriptions), 其中:
1.  $q \in Q$  为当前 M 的状态;
2. 当前读头正在扫描 $X_i$  TM推导关系ト 给定图灵机  $M = (Q, \Sigma, \Gamma, \delta, q_0, B, F)$ 定义 ID's 之间的推导关系ト $_M$  (或ト) 如下: 1. 设  $\delta(q, X) = (p, Y, L)$ , 则有  $X_1X_2...X_{k-1}qXX_{k+1}...X_n$ ト $_M$   $X_1X_2...X_{k-2}pX_{k-1}Y...X_n$ 两个例外: (1) i=1 时, $qX_1X_2...X_n$ ト $_M$   $pBYX_2...X_n$ (2) i=n 且 Y=B 时,  $X_1X_2...X_{n-1}qX_n$ ト $_M$   $X_1X_2...X_{n-2}pX_{n-1}$

## **递归可枚举语言**• 停机: 若TM没有可能的后续转移,则停机。 • 定理: 任给图灵机 M, 容易构造一个图灵机 M', 使得 L(M) = L(M'),并满足:如果∈L(M),则对于 w, M'接受 w并一定停机。 由此结论,如果没有特别指出,今后假定图灵机到达终态后一定停机。 但是,若w∉L(M),则对于 w, M不一定能停机。
